ColorMouse-USB-MD™ USB 2.0 electronic magnifier

**Windows 7,
Vista & XP**

The ColorMouse-USB-MD connects directly to any USB 2.0 port without the need for any other cables or connectors. Drawing only a very small amount of power, this is an ideal electronic magnifier to use especially with laptop or notebook computers. It is, of course, just as convenient when used with desktop computers in the home, school or office.

The new ColorMouse-USB-MD offers MD Mode to provide pure white text on a black background and pure black text on a white background for maximum contrast and reduced glare for anyone with acute sensitivity to light. This can be especially beneficial to anyone with Macular Degeneration. Other features include variable magnification and image freeze facility.

**For school or office, full colour,
positive and negative text and
charts on any PC running XP, Vista
or Windows 7 with a USB 2.0 port.**
