Explora-Plus™ Pocket Electronic Magnifier

When out and about, or even at home, the Explora-Plus makes for quick and easy magnification. A single button turns the unit on, controls the LED lights and turns the unit off. Various modes, such as full colour, MD with pure white text on a pure black background, enhanced positive with pure black text on a pure white background and grayscale where the colour is removed for increased clarity are all controlled by a single button. Using the 'freeze' button, an image can easily be taken and held on the screen while you move the Explora-Plus closer to your eyes for a more detailed look.

At home, the Explora-Plus can be connected to a regular television or any monitor with video input for increased magnification

If you are looking for a portable, truly pocket size, electronic magnifier that is fully loaded and yet still remains simple, affordable and has outstanding image quality, look no further than the Explora-Plus.
