ColorMouse-USB-RM™ USB 2.0 electronic magnifier

**Windows 7,
Vista & XP**

The ColorMouse-USB-RM is a unique product. It connects directly to any USB 2.0 port without the need for any other cables or connectors. Drawing only a very small amount of power, this is an ideal electronic magnifier to use especially with laptop or notebook computers. It is, of course, just as convenient when used with desktop computers in the home or office.

Not only does the new ColorMouse-USB-RM have improved, vivid colour quality, but it also offers Reverse Mode to provide pure white text on a black background and pure black text on a white background for maximum contrast and reduced glare for anyone with acute sensitivity to light. This can be especially beneficial to anyone with Macular Degeneration.

For school or office, full colour, positive and negative text and charts on any PC running XP, Vista or Windows 7 with a USB 2.0 port.
